Noun phrase structure in Old Norse

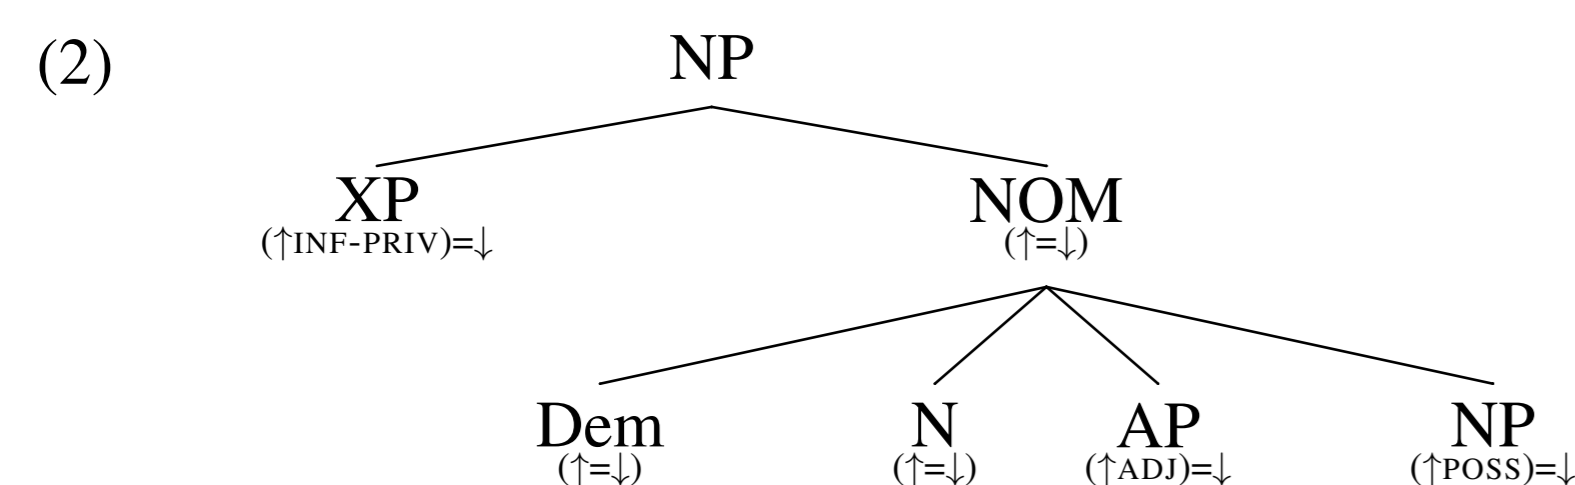

- (in)definiteness marking is not required for (in)definite interpretation
- there are a number of definiteness markers
 - free (*h*)*inn* and bound *-inn*
 - distal demonstrative *sá* (most forms in *þ-* such as *þat*)
 - proximal demonstrative *sjá* (most forms in *þ-* such as *þetta*).
- *einn* is not yet an indefinite article
- ‘the word order within the NP seems almost totally unconstrained by syntactic rules’ (Faarlund 2004: 55)
- free word order represented as flat structure
- initial information-structurally privileged position

In *Gunnlaugs saga Ormstungu* possessives generally postnominal:

faðir hans ‘his father’ *húsfreyja þín* ‘your wife’
dóttur þinnar ‘your daughter’ *bróður sinn* ‘his.REFL brother’
kona hans ‘his wife’ *frændi minn* ‘my kinsman’

But when contrastive prenominal:

- (1) at **minn faðir** væri eptirbát **þins föður**
that my father was after.boat you.GEN father.GEN
‘that my father trailed in the wake of your father’ (Gunn1 9.33)

Adjectives in Old Norse

Adjectives occur in two forms:

- STRONG adjectives are associated with indefiniteness, but can occur in definite noun phrases (see Delsing 1994, Stroh-Wollin & Simke 2014)

- (3) *slægr karl ok vitr*
cunning.STR man and clever.STR (Bandamenn, 784)

- WEAK adjectives occur only in definite noun phrases and always accompanied by (*h*)*inn*
- (*h*)*inn* only occurs immediately preceding a weak adjective

Regardless of whether the adjective precedes or follows the noun and repeated for each adjective:

- (4) *maðr hinn sami*
man HINN same.WK (Grettir, 1694)

- (5) *hinir skírlífustu ok hinir postulígustu menn*
HINN most chaste and HINN most apostolic man.PL
(Marta, 805)

Even when the adjective would otherwise be immediately preceded by another definite element:

- (6) *það ið mikla hark ok óp*
DEM HINN great.WK tumult and shouting (Alexander, 1323)

- (7) *Stýrimannskona sú hin unga skipper's wife*
DEM HINN young.WK
‘that young wife of the skipper’ (Grettir, 409)

- adjectives appear not to occur recursively: co-ordination with more than one adjective

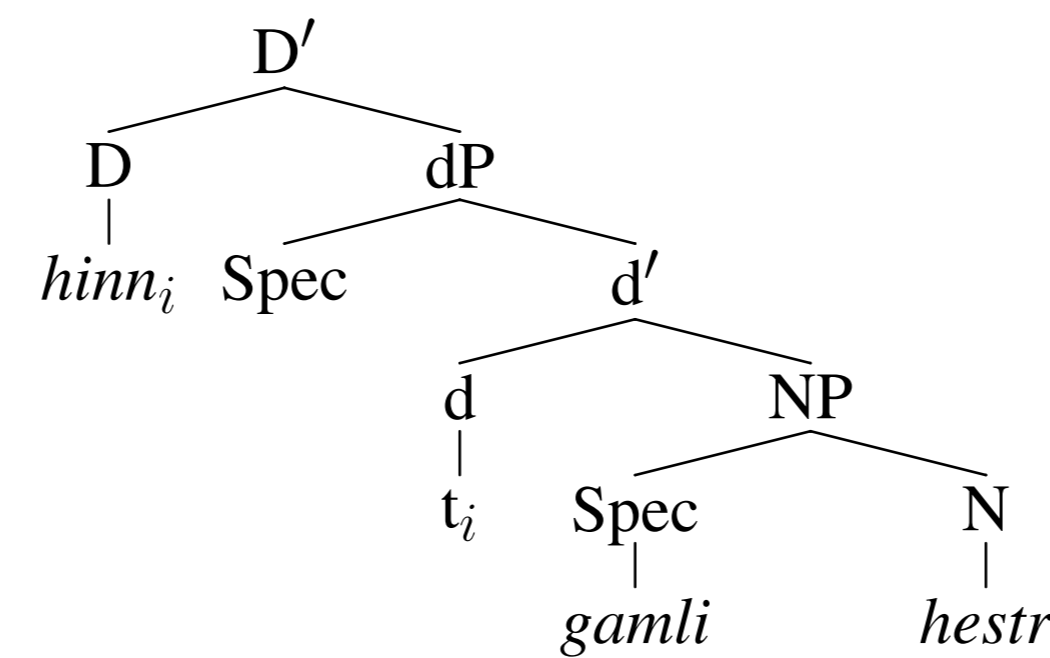

- (8) *fátækjan ok útlendan sigurvegara*
poor.STR.ACC and foreign.STR.ACC conqueror.acc
(Alexander, 564)

- (9) *Lítið verk ok löðrmannglegt*
petty.STR.NOM work and cowardly.STR.NOM
‘petty and cowardly work’ (Grettir, 26)

The role of (*h*)*inn*

- ‘North-Germanic and Rumanian developed an “adjectival” article, which in principle only has scope over an adjective’ (Perridon & Sleeman 2011: 8)
- (*h*)*inn* ‘seems to be just a formal element preceding adjectives with the so-called weak inflection’ (Stroh-Wollin 2009: 7–9)
- association between adjective and definiteness in other varieties of early Germanic (Curme 1910, Heinrichs 1954)
- but theoretical analyses do not capture this

Previous analyses of (*h*)*inn*

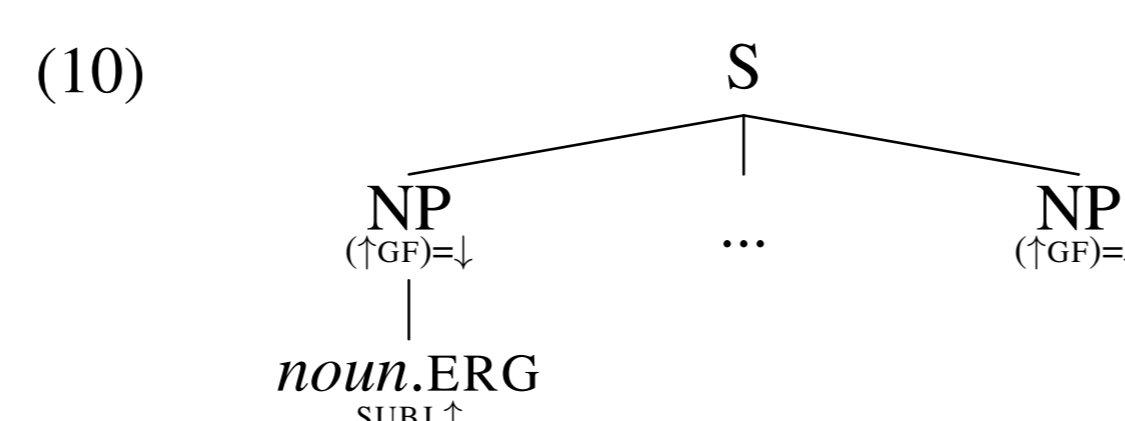

(Stroh-Wollin (2009: 19), see also Faarlund (2004, 2009) and Lohndal (2007))

The analysis of (*h*)*inn*

- Riebler refers to elements whose role it is to ‘to specify the syntactic relation between a head noun and an adjectival modifier’ (2011: 57)
- (*h*)*inn* licenses the weak adjective as a modifier
- the licensing is functional rather than categorial, (*h*)*inn* allows the weak A to function as an ADJ

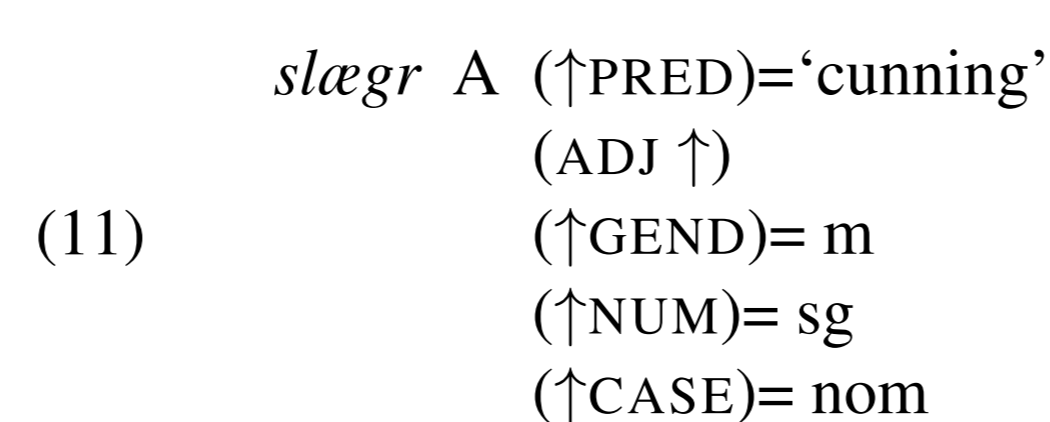

Functional uncertainty and inside-out designators

- compare functional uncertainty in clauses in for instance Wambaya as in (10) (Nordlinger 1998)
- case markers contribute inside-out designators which resolve uncertainty: SUBJ↑ in (10)

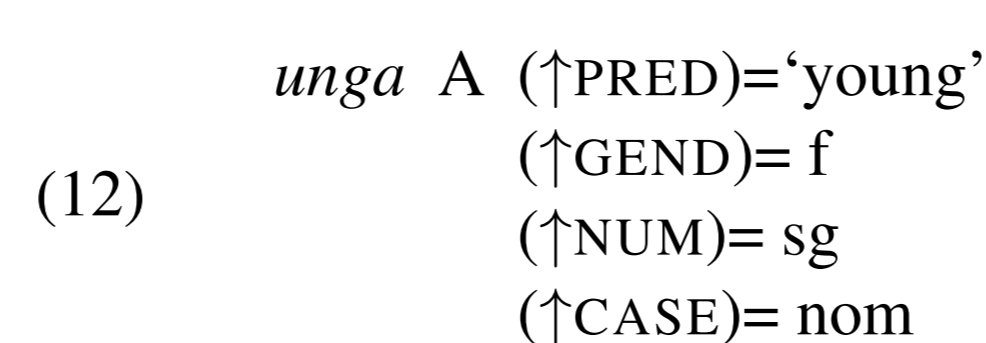

Functional uncertainty and ON adjectives

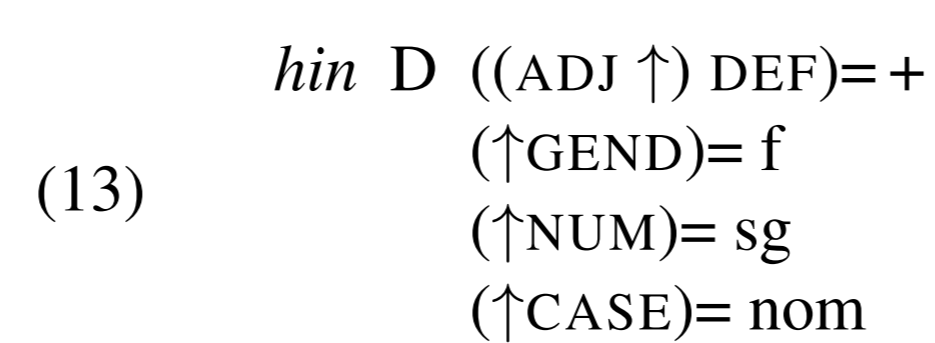

- A STR adjective is associated with an inside-out designator that creates an ADJ (cf *slægr* in (3)):

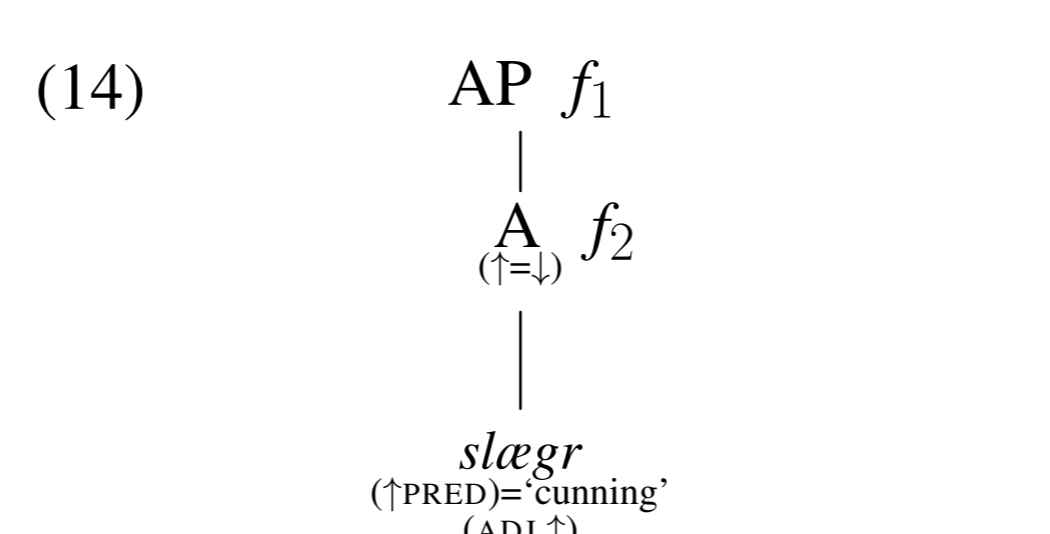

- A WK adjective has no such designator (cf *unga* in (7)):

- But (*h*)*inn* does, and it also assigns [+DEF] to the noun phrase:

Noun phrase with strong adjective

Noun phrase with weak adjective

Functional uncertainty and the AP

- if the lexical items create the grammatical function ADJ, this does not have to be introduced structurally
- we can then introduce functional uncertainty into the tree to get (19) instead of (18)
- in (19) we generalise over function — GF — and over category — XP

Functional uncertainty beyond the AP

- the annotation involving functional uncertainty in (19), permits any function within the NP
- hence we no longer need a separate node with (↑POSS) as in (2)
- possessive pronouns and genitive noun phrases are associated with a designator that constructs the specific function

For instance *hans* in (20) and (21) gets the specification in (22):

- (20) *hans sendiboðum hinum hæstum*
3.SG.M.GEN messenger.PL HINN high.SPL (Marta, 445)

- (21) *In vinstri hönd hans*
HINN left hand 3.SG.M.GEN (Homiliubok, 813)

- (22) *hans* Pron (↑PRED)=pro;
(↑CASE)=gen
(POSS ↑)

Hypothesised historical development

- (*h*)*inn* started out as a functional licenser of a weak adjective
- it is likely that the weak adjective was definite in origin (see for instance Stroh-Wollin (2009: 5) and Ratkus (2010: 249) for Gothic)
- over time, (*h*)*inn* came to be structurally associated with the noun phrase rather than the adjective phrase, and later it was replaced in this use by what is now *den* in the modern Mainland Scandinavian languages
- In Icelandic an adjective does not need a syntactic determiner, but in Mainland Scandinavian and Faroese it does, we argue this is structural persistence
